

M107A1™

BARRETT®

M107A1™

Thermal cheek guard.

Back up iron sights.

Suppressor capable operating system.

7075 aluminum upper receiver.

Integral 27 MOA 24-inch M1913 accessory rail.

Chrome lined chamber and bore.

Suppressor ready muzzle brake.

Lightweight monopod.

Modular handgrip mounted on M1913 rail.

10-round magazine with cartridge witness indicators.

Lightweight quick-detach bipod with modular feet.

Accepts M1913 accessory rails.

Barrett .50 Caliber Sound Suppressor that is designed to work with the rifle's recoil-operated action.

M107A1™

Designed to be used with a suppressor, this one-of-a-kind rifle allows you to combine signature reduction capabilities with the flawless reliability of the original Barrett® M107. An all-new bolt carrier group has been designed that is key to making the rifle suppressor ready. An all-new bolt carrier group has been designed that is key to making the rifle suppressor ready. Its titanium four-port muzzle brake is engineered to work seamlessly with a quick-attach Barrett .50 BMG Suppressor.

The lightweight aluminum upper receiver features an integrated, rigid 27 MOA optics rail. Inside the upper receiver, the bolt carrier rides on a hardened steel, anti-wear strip for added durability. A thermal-guard cheek piece protects the user's face from extreme heat or cold.

Advanced design and manufacturing make the M107A1 more precise than ever. The rear-barrel stop and front-barrel bushing are bolted and bonded with a compound similar to that used on space shuttles.

A titanium barrel key and fully chrome-lined bore and chamber add to the rifle's durability.

Enhanced modularity is also a key feature. The rifle's rail-mounted aluminum rear grip can easily be reconfigured. The newly designed titanium and polymer monopod is easily adjustable from either side.

The M107A1 rifle's lower receiver includes a new recoil buffer system that is optimized for use with a suppressor. The bolt carrier's components are protected with a mix of ultra hard PVD coatings and advanced nickel Teflon® plating that increases lubricity, is corrosion-resistant and greatly eases cleaning.

Numbered witness holes on the magazine are just another example of how even the smallest detail makes a powerful difference.

SPECIFICATIONS

Model: M107A1	Rifle Weight: 30.9 lbs (14 kg)
Caliber: .50 BMG	Safety: Manual Thumb Lever
Rifle Operation: Semi-Automatic	Sights: Flip-Up Iron Sights
Overall Length: 57" (145 cm)	Optics Rail: 24" (60.96 cm)
Barrel Length: 29" (73.7 cm)	Magazine: 10-Round Capacity
Rifling Twist: 1 in 15" (38.1 cm) Right Hand Twist	All Specifications Are Subject To Change.
